Schlyer Machine Announces New *QuickWash* Feature

Schlyer Machine (SMC) is proud to announce the availability of the new SMC QuickWash option to their RW6290 line of Cage and Rack Washers. This new feature allows up to 100 standard mouse cages to be cleaned and sanitized in 10 minutes or less, while completely preserving the option to run any of the traditional Rackwasher cycles with heavy-duty wash and recirculated rinses, Acid treatment, and so on. This feature can, in many cases, be retrofitted along with modern controls to existing Rackwashers in order to update operations, increase throughput, and allow state-of-the-art flexibility and cycle validation.
